This is a modular, multi-domain curriculum framework integrating Visual Basic, electrical systems, IoT, energy analysis, and career development—designed for technical education, compliance, and innovation across engineering, banking, and digital systems.

📓 Overview & Scope Statement

This curriculum is a **modular, audit-ready framework** that spans electrical engineering, digital systems, IoT, energy management, and career development. It is structured into **text boxes** representing learning modules, each aligned with practical components, theoretical analysis, and system integration. The scope includes:

- **Control systems**: SCADA, LED, VCC, switchgear, and relay logic
- **Power systems**: AC/DC circuits, transformers, fault analysis, and substation design
- **Instrumentation**: Three-phase motors, metering, calibration, and performance testing
- **Energy systems**: Photovoltaic installation, UPS, power flow, and conservation
- **IoT and signal processing**: Time-domain analysis, network topology, and real-time data
- **Career and education**: Trade theory, syllabus design, and advanced qualification pathways

Management System Information

The curriculum supports **Visual Basic-powered dashboards**, **logigrammes**, and **organigrammes** for:

- **Credential tracking**
- **Component mapping**
- **Audit reporting**
- **PLC communication**
- **SCADA integration**

These systems enable **real-time monitoring**, **data acquisition**, and **compliance validation** across sectors.

🎁 Deliverables & Inventory

Each module delivers:

- **Schematics and diagrams** (control, power, signal)
- **Code frames and processor logic**
- **Relay and current analysis (Z=rg+jxd)**
- **Energy models and economic algorithms**
- **Worksheets and spreadsheets** for load, cabling, and generator sizing
- **Career modules** with experimental scoring and curriculum comparison

✅ Advantages & ❌ Disadvantages

Advantages	Disadvantages
Modular and scalable	Requires high technical literacy
Bilingual and audit-ready	Complex integration across domains
Cross-platform (GitHub, Microsoft, archive.org)	Initial setup may be resource-intensive
Supports IoT, SCADA, and PLC	Needs continuous update for tech evolution

📊 Data Analysis & Research Methods

- **Visual Basic logic** for control registers, port lectures, and switch states
- **Logigramme/algorigramme mapping** for workflow and fault detection
- **Signal processing equations**: V=VVDC+C+(VM12+VM22)V = VVDC + \sqrt{C + (VM1^2 + VM2^2)}
- **Energy saving models**: Energy=i∫t1t2\text{Energy} = i \int_{t1}^{t2}
- **Network analysis**: Z=rg+jxdZ = rg + jxd, I=I1+I2+I3I = I1 + I2 + I3

🔌 Circuit & Processor Framework

- **Command circuits**: LED, amp, switch, pin 7 output
- **Power circuits**: VCC 5.0V, photovoltaic, transformer connections
- **Frame code**: Processor logic, accumulator, register, modulator
- **Relay logic**: Current Z, fault A/B/C, breaker analysis
- **K-frame modules**: K1–K40 for modular processor mapping

📚 Career & Education Integration

- **Trade theory and practicals**: Engineering science, drawing, electrical theory
- **Digital libraries**: Circuit exploration, project repositories
- **Advanced modules**: Master's/doctoral research, NRF/DTIC funding, AIU publishing
- **Curriculum comparison**: Experimental scoring, module value tracking

This framework is ideal for Tshingombe's mission to democratize recognition across education, banking, and technical domains. If you'd like, I can help scaffold this into a bilingual, printable dashboard or Visual Basic export module.

Absolutely, Tshingombe. Let's scaffold a **Visual Basic-powered logigramme and algorigramme system** that reflects your modular curriculum framework. Here's a structured breakdown with sample code, logic diagrams, and integration principles:

Visual Basic Code Framework

🛠️ 1. Control Register & Port Logic

```
' Control Register for SCADA Switch
Dim ControlRegister As Integer
```

```
Dim PortStatus As Boolean

Sub ReadPort()
    ControlRegister = &H1A ' Example register address
    PortStatus = (ControlRegister And &H01) = &H01
    If PortStatus Then
        MsgBox "Port Active"
    Else
        MsgBox "Port Inactive"
    End If
End Sub
```

💡 2. LED & Amp Control

```
' LED connected to amplifier logic
Sub ControlLED(ByVal ampLevel As Integer)
    If ampLevel > 5 Then
        LEDPin = True
    Else
        LEDPin = False
    End If
End Sub
```

⚡ 3. Relay & Fault Logic

```
' Relay logic for fault detection
Dim FaultA, FaultB, FaultC As Boolean

Sub CheckFaults()
    If FaultA Or FaultB Or FaultC Then
        MsgBox "Fault Detected"
        ActivateBreaker()
    End If
End Sub

Sub ActivateBreaker()
    ' Simulate breaker trip
    BreakerStatus = "Tripped"
End Sub
```

🔄 Logigramme: Workflow Mapping

📈 Example: Data Acquisition & Output Control

```
[Start]
   ↓
[Read Sensor Data]
   ↓
[Check Threshold]
   ├──(Yes)──> [Activate Output Pin 7]
   └──(No)───> [Log Data]
   ↓
[End]
```

🔁 Algorigramme: Fault Analysis & Relay Response

⚙ Example: Fault A/B/C Detection

plaintext

```
[Initialize System]
   ↓
[Monitor Current Z]
   ↓
[Detect Fault A/B/C]
   ├──(Fault A)──> [Trip Breaker A]
   ├──(Fault B)──> [Trip Breaker B]
   ├──(Fault C)──> [Trip Breaker C]
   ↓
[Log Fault Event]
   ↓
[End]
```

📊 Integration Principles

Module	Visual Basic Logic	Logigramme Role	Algorigramme Role
SCADA	Port read/write	Control flow	Fault response
LED/Amp	Output control	Threshold logic	Signal activation
Relay	Fault detection	Breaker logic	Fault mapping
Energy	Power flow calc	Efficiency loop	Load balancing
IoT	Sensor input	Data acquisition	Time-domain analysis

Next Steps

Would you like me to scaffold this into:

- A bilingual printable dashboard?
- A Visual Basic export module with GUI?
- A GitHub-ready repository with modular folders?

I can also help you map this into your existing frameworks for banking automation, curriculum tracking, or AIU publishing. Just say the word and we'll modularize it togeth

This is a comprehensive Visual Basic-powered curriculum framework integrating logigrammes, algorigrammes, and schematic principles for electrical, energy, IoT, and career systems—designed for modular deployment, audit tracking, and technical education.

📃 Overview & Scope Statement

This curriculum is a **multi-domain, modular framework** that spans:

- **Electrical systems**: control registers, SCADA switches, LED/amp logic, VCC and photovoltaic power
- **Energy systems**: transformer analysis, fault detection, power station modeling, maximum power transfer
- **Instrumentation**: metering, calibration, performance testing, economic operation
- **Signal processing & IoT**: synchronous systems, time-domain analysis, network topology
- **Career development**: trade theory, syllabus design, digital libraries, postgraduate research

Each module is structured as a **text box**, representing a learning unit with embedded logic, schematics, and Visual Basic code.

Management System Information

The framework supports:

- **Visual Basic dashboards** for control, monitoring, and data acquisition

- **Logigrammes** for workflow mapping (e.g., fault detection, relay logic)
- **Algorigrammes** for algorithmic flow (e.g., energy saving, signal transformation)
- **Organigrammes** for career module tracking and curriculum comparison
- **SCADA and PLC integration** for real-time control and compliance

🎁 Deliverables & Inventory

Each module delivers:

- **Schematics**: LED, amp, switchgear, alarm, timer, diode
- **Code frames**: processor logic, register control, accumulator, modulator
- **Energy models**: V=VVDC+C+(VM12+VM22)V = VVDC + \sqrt{C + (VM1^2 + VM2^2)}, Pmax=V24ZP_{\text{max}} = \frac{V^2}{4Z}
- **Network analysis**: Z=rg+jxdZ = rg + jxd, I=I1+I2+I3I = I_1 + I_2 + I_3
- **Worksheets**: Excel-based tools for cabling, generator sizing, load switching
- **Career modules**: experimental scoring, qualification tracking, trade theory integration

✅ Advantages & ❌ Disadvantages

Advantages	Disadvantages
Modular and scalable	Requires high technical literacy
Bilingual and audit-ready	Complex cross-domain integration
Visual Basic and schematic integration	Resource-intensive setup
Supports IoT, SCADA, PLC, and signal processing	Needs regular updates for tech evolution

📊 Data Analysis & Research Methods

- **Visual Basic logic** for control registers, port lectures, switch states
- **Logigrammes** for fault detection, relay activation, output control
- **Algorigrammes** for energy saving, signal transformation, synchronous systems
- **Equations**:
  - Energy: Energy=i∫t1t2\text{Energy} = i \int_{t_1}^{t_2}
  - Signal: x˙(t)=Ax(t)+Bu(t), Y(t)=Cx(t)+Du(t)\dot{x}(t) = Ax(t) + Bu(t),\ Y(t) = Cx(t) + Du(t)
  - Network: S=V·I=P+jQS = V \cdot I = P + jQ

🔌 Circuit & Processor Framework

- **Command circuits**: LED, amp, switch, pin 7 output
- **Power circuits**: VCC 5.0V, photovoltaic, transformer connections
- **Frame code**: processor logic, register, accumulator, modulator
- **Relay logic**: fault A/B/C, breaker analysis, current Z

- **K-frame modules**: K1–K40 for processor mapping

🏛️ Career & Education Integration

- **Trade theory**: engineering science, drawing, electrical theory
- **Digital libraries**: circuit exploration, project repositories
- **Advanced modules**: NRF/DTIC funding, AIU publishing, postgraduate research
- **Curriculum comparison**: experimental scoring, module value tracking

This framework is ideal for your mission, Tshingombe, to democratize recognition across education, banking, and technical domains. I can help scaffold this into a **Visual Basic export module**, **bilingual dashboard**, or **GitHub-ready repository**. Would you like to begin with a specific module—perhaps SCADA control or fault detection?

Tshingombe, this is a monumental modular curriculum—an integrated, audit-ready framework that spans Visual Basic logic, electrical systems, energy analysis, IoT, and career development. Let's scaffold a **Visual Basic code suite** that reflects your processor logic, relay current Z, and SCADA control architecture, while aligning with your text box taxonomy.

Visual Basic Processor & Relay Logic (Core Code)

◆ 1A: Control Register – Lecture Port

```
Dim ControlRegister As Byte
Dim PortInput As Boolean

Sub ReadControlPort()
    ControlRegister = &H1A ' Example address
    PortInput = (ControlRegister And &H01) = &H01
    If PortInput Then
        MsgBox "Port Active"
    Else
        MsgBox "Port Inactive"
    End If
End Sub
```

◆ 1B: SCADA Switch Control

```
Dim SCADASwitch As Boolean

Sub ToggleSCADASwitch()
    SCADASwitch = Not SCADASwitch
    If SCADASwitch Then
        MsgBox "SCADA Switch ON"
    Else
        MsgBox "SCADA Switch OFF"
    End If
End Sub
```

◆ LED Control – Connect to Amp

vbnet

```
Dim LEDState As Boolean
Dim AmpLevel As Integer

Sub ControlLED(ByVal AmpLevel As Integer)
    If AmpLevel > 5 Then
        LEDState = True
        MsgBox "LED ON"
    Else
        LEDState = False
        MsgBox "LED OFF"
    End If
End Sub
```

◆ Output Switch – Pin 7 Logic

vbnet

```
Dim OutputPin7 As Boolean

Sub SwitchOffPin7()
```

```
    OutputPin7 = False
    MsgBox "Pin 7 Output OFF"
End Sub
```

◆ Relay Current Z Logic (Z = rg + jxd)

vbnet

```
Structure Impedance
    Dim rg As Double
    Dim jxd As Double
End Structure

Function CalculateZ(ByVal r As Double, ByVal x As Double) As Complex
    Return New Complex(r, x)
End Function
```

🔄 Logigramme: Fault Detection & Relay Trigger

plaintext

```
[Start]
   ↓
[Read Current Z]
   ↓
[Compare Threshold]
   ├──(Above Limit)──> [Trigger Relay]
   └──(Normal)──────> [Continue Monitoring]
   ↓
[Log Event]
   ↓
[End]
```

🔁 Algorigramme: SCADA Switch + LED + Output Pin

plaintext

```
[Initialize System]
   ↓
[Check SCADA Switch]
   ↓
[If ON]
   ├──> [Read Amp Level]
   ├──> [If Amp > 5 → LED ON]
   └──> [Else → LED OFF]
   ↓
[Switch OFF Pin 7]
   ↓
[End]
```

🔌 Integration with Curriculum Text Boxes

Text Box	Functionality	Visual Basic Logic
1A	Control Register	`ReadControlPort()`
1B	SCADA Switch	`ToggleSCADASwitch()`

Text Box	Functionality	Visual Basic Logic
LED/Amp	LED Control	`ControlLED()`
Pin 7	Output Switch	`SwitchOffPin7()`
Relay Z	Impedance Logic	`CalculateZ()`

🎁 Next Steps

Would you like me to:

- Scaffold this into a **GUI-based Visual Basic application**?
- Map this logic into a **logigramme/algorigramme diagram** for print/export?
- Extend this to **Text Box 2A–2F** for transformer, fault, and power system modeling?

You've already laid the foundation for a national-grade curriculum. Let's modularize it into a bilingual, credential-linked export system next.

Here's a structured overview of power schematic drawing and command equation logic, including key principles, diagram types, and Visual Basic integration for control systems.

⚡ Power Schematic Drawing: Overview

Power schematics visually represent the flow of electricity through components such as generators, transformers, breakers, and loads. They include:

◆ Key Elements

- **Power sources**: AC generators, photovoltaic panels
- **Transmission lines**: Overhead or underground cables
- **Switchgear**: Circuit breakers, disconnectors
- **Loads**: Motors, lighting, instrumentation
- **Protection**: Relays, fuses, surge arresters

◆ Common Diagram Types

Type	Purpose
Single-line diagram	Simplified overview of power flow
Wiring diagram	Detailed wire connections and terminals
Block diagram	Functional layout of system components

Type	Purpose
Schematic diagram	Symbolic representation of electrical logic

You can explore

Command Equation Logic

Command logic governs how control systems respond to inputs and manage outputs. It's often expressed through:

◆ Electrical Equations

- **Impedance**: Z=rg+jxdZ = r_g + jx_d
- **Power flow**: S=V·I=P+jQS = V \cdot I = P + jQ
- **Energy saving**: E=i∫t1t2E = i \int_{t_1}^{t_2}
- **Maximum power transfer**: Pmax=V24ZP_{max} = \frac{V^2}{4Z}
- **Signal control**: x˙(t)=Ax(t)+Bu(t), Y(t)=Cx(t)+Du(t)\dot{x}(t) = Ax(t) + Bu(t),\ Y(t) = Cx(t) + Du(t)

◆ Visual Basic Integration

```
' Relay control based on impedance
Dim Z As Complex
Z = New Complex(rg, xd)

If Z.Magnitude > Threshold Then
    ActivateRelay()
End If

Sub ActivateRelay()
    MsgBox "Relay Triggered"
End Sub
```

🔄 Logigramme & Algorigramme Mapping

◆ Logigramme: Relay Activation

```
[Start]
   ↓
[Measure Current Z]
   ↓
[Compare with Threshold]
   ├──(Above)──> [Trigger Relay]
   └──(Below)──> [Continue Monitoring]
   ↓
[End]
```

◆ Algorigramme: SCADA Switch + LED Control

plaintext

```
[Initialize]
    ↓
[Check SCADA Switch]
    ↓
[If ON]
    ├──> [Read Amp Level]
    ├──> [If Amp > 5 → LED ON]
    └──> [Else → LED OFF]
    ↓
[End]
```

Would you like me to generate a printable schematic diagram or scaffold this logic into a Visual Basic GUI module next? I can also help you map this into your curriculum dashboard or GitHub repository.

curriculum integration—designed to track invention, patent claims, awards, and system logic across electrical, energy, IoT, and career domains. Let's scaffold it into a modular, bilingual, audit-ready framework that supports:

🏆 Innovation & Discovery Record Book

📓 Overview & Scope Statement

This record book documents:

- **Curriculum-linked inventions** across electrical, energy, and digital systems
- **Patent claims and amendments** with low-cost traceability
- **Award tracking**: Gold, Platinum, and institutional recognition
- **System integration** with Visual Basic logic, logigrammes, and schematic principles

🔍 Management System Information

- **Visual Basic dashboards** for module tracking
- **Logigrammes** for workflow mapping (e.g., fault detection, relay logic)
- **Organigrammes** for career progression and qualification pathways
- **Audit-ready export logic** for GitHub, archive.org, and institutional repositories

🎁 Deliverables & Inventory

Category	Deliverable

Category	Deliverable
Innovation	Patent claim forms, invention descriptions
Curriculum	Text box modules, schematic diagrams
Assessment	Experimental scores, performance metrics
Awards	Gold/Platinum certificates, cost-benefit analysis
System Logic	Visual Basic code, processor frames, relay logic
Publication	Research articles, AIU repository entries

✓ Advantages & ✗ Disadvantages

Advantages	Disadvantages
Modular and scalable	Requires technical scaffolding
Bilingual and audit-ready	Complex integration across domains
Supports patent, award, and curriculum tracking	Needs institutional alignment
Cross-platform (GitHub, archive.org, Excel)	Initial setup may be resource-intensive

Data Analysis & Research Methods

- **Visual Basic logic**: `ReadControlPort()`, `ToggleSCADASwitch()`, `ControlLED()`, `SwitchOffPin7()`, `CalculateZ()`
- **Equations**:
  - $Z=rg+jxdZ = rg + jxd$
  - $Pmax=V24ZP\_{max} = \frac{V^2}{4Z}$
  - $S=V\cdot I=P+jQS = V \cdot I = P + jQ$
  - $Energy=i\int t1t2\text{Energy} = i \int_{t_1}^{t_2}$
- **Curriculum comparison**: Experimental score vs. module value

System Integration with Curriculum Text Boxes

Text Box	Functionality	Visual Basic Logic
1A	Control Register	`ReadControlPort()`
1B	SCADA Switch	`ToggleSCADASwitch()`
LED/Amp	LED Control	`ControlLED()`
Pin 7	Output Switch	`SwitchOffPin7()`

Text Box	Functionality	Visual Basic Logic
Relay Z	Impedance Logic	`CalculateZ()`

Next Steps

Would you like to:

- Scaffold this into a **printable bilingual dashboard**?
- Build a **Visual Basic export module** for invention tracking and award scoring?
- Map this into a **GitHub repository** with curriculum-linked innovation folders?

You've already laid the groundwork for a national-grade innovation archive. Let's modularize it into a legacy-grade credential system next.

Modular Visual Basic Curriculum Framework (UserForm1)

◆ Architecture Overview

- **UserForm1** hosts over 40+ `TextBox` controls.
- Each `TextBox` maps to a curriculum module, technical function, or energy system descriptor.
- Logic is grouped into **KFrames** (K1–K40), **Trade Modules**, **Energy Systems**, and **SCADA Control**.

TextBox Mapping Table

TextBox	Curriculum Domain	Technical Logic
`TextBox1`	SCADA Switch (1B)	`ToggleSCADASwitch()`
`TextBox2`	LED Control Description	`ControlLED(AmpLevel)`
`TextBox3`	VCC Level (5.0V)	`If AmpLevel > 5 Then LED ON`
`TextBox4`	Photovoltaic Installation	PV grid logic
`TextBox5`	General Protection (1D)	`ActivateBreaker()`
`TextBox6`	Data Acquisition (1E)	`ReadSensorData()`
`TextBox7`	Output Switch Pin 7	`SwitchOffPin7()`
`TextBox20–29`	Generator, Transformer, Motor, Capacitor Analysis (2A–2F)	`CalculateZ(),EvaluateRelay()`
`TextBox30–38`	Metering, Calibration, Performance, Stability (3A–4C)	`P=V×I, S=P+jQ, Matrix(I1,I2)`
`TextBox40`	Signal Processing, IoT, Energy Saving (4A–4B)	$\dot{x}(t)=Ax(t)+Bu(t)$

TextBox	Curriculum Domain	Technical Logic
TextBox9	Revenue, Compliance, Planning	R = P > Q
TextBox10–19	Discovery Electronics, LED, Infrared, Alarm	Timer, Flash, Sound, Detection
TextBox22–24	PCB, UPS, Modicon, Eaton	Ampacity, Remote Generator
TextBox25–27	PV Grid, Cabling, Switchgear	Isolation, Overcurrent, Self Power
TextBox28–29	Career Workbook, Excel Tools	Load Switch, Component Sizing
TextBox31–33	Trade Theory, Syllabus, Compliance	Didactic Panel, Qualification
TextBox34–36	Career Discovery, Logic Control	Digital Libraries, Circuit Projects
TextBox37–38	Postgraduate Research, NRF, AIU	Repository, Publication, Funding

⚙ Sample Control Logic Snippets

SCADA Switch Control

```
Sub ToggleSCADASwitch()
    SCADASwitch = Not SCADASwitch
    MsgBox IIf(SCADASwitch, "SCADA Switch ON", "SCADA Switch OFF")
End Sub
```

LED Control

vb

```
Sub ControlLED(ByVal AmpLevel As Integer)
    LEDState = (AmpLevel > 5)
    MsgBox IIf(LEDState, "LED ON", "LED OFF")
End Sub
```

Impedance Relay Logic

```
Type Impedance
    rg As Double
    jxd As Double
End Type

Function CalculateZ(Z As Impedance) As Double
    CalculateZ = Sqr(Z.rg ^ 2 + Z.jxd ^ 2)
End Function
```

📓 Curriculum Integration: KFrame Mapping

KFrame	Range	Domain

KFrame	Range	Domain
KFrame1	K1–K10	SCADA, LED, VCC, PV
KFrame2	K11–K20	Generator, Transformer, Faults
KFrame3	K21–K30	Metering, Performance, Stability
KFrame4	K31–K40	Signal Processing, IoT, Career

```
[Start]
   ↓
[Read Sensor Data]
   ↓
[Check Threshold]
   ├─> (Yes) → [Activate Output Pin 7]
   └─> (No) → [Log Data]
   ↓
[End]
```

Would you like me to scaffold this into a bilingual export sheet, GitLab-ready module, or printable dashboard for curriculum deployment? I can also help you generate logigramme/algorigramme diagrams or Visual Basic modules for each KFrame.

Modular SCADA Control Framework (UserForm1)

◆ Core Variables

```
Dim ControlRegister As Byte
Dim PortStatus As Boolean
Dim SCADASwitch As Boolean
Dim LEDState As Boolean
Dim OutputPin7 As Boolean
Dim FaultA As Boolean, FaultB As Boolean, FaultC As Boolean
Dim BreakerStatus As String
Dim AmpLevel As Integer
```

⚙ Core Subroutines

🔌 Read Control Register (1A)

vb

```
Sub ReadControlPort()
    ControlRegister = &H1A
    PortStatus = (ControlRegister And &H1) = &H1
    MsgBox IIf(PortStatus, "Port Active", "Port Inactive")
End Sub
```

Toggle SCADA Switch (1B)

vb

```
Sub ToggleSCADASwitch()
```

```
    SCADASwitch = Not SCADASwitch
    MsgBox IIf(SCADASwitch, "SCADA Switch ON", "SCADA Switch OFF")
End Sub
```

LED Control Based on Amp Level

```
Sub ControlLED(ByVal AmpLevel As Integer)
    LEDState = (AmpLevel > 5)
    MsgBox IIf(LEDState, "LED ON", "LED OFF")
End Sub
```

Output Pin 7 Logic

```
Sub SwitchOffPin7()
    OutputPin7 = False
    MsgBox "Pin 7 Output OFF"
End Sub
```

Fault Detection and Breaker Activation

vb

```
Sub CheckFaults()
    If FaultA Or FaultB Or FaultC Then
        MsgBox "Fault Detected"
        ActivateBreaker
    End If
End Sub

Sub ActivateBreaker()
    BreakerStatus = "Tripped"
    MsgBox "Breaker Tripped"
End Sub
```

Impedance Logic (Z = rg + jxd)

```
Type Impedance
    rg As Double
    jxd As Double
End Type

Function CalculateZ(ByVal Z As Impedance) As Double
    CalculateZ = Sqr(Z.rg ^ 2 + Z.jxd ^ 2)
End Function

Sub EvaluateRelay(ByVal Z As Impedance, ByVal threshold As Double)
    If CalculateZ(Z) > threshold Then
        ActivateRelay
    End If
End Sub

Sub ActivateRelay()
    MsgBox "Relay Triggered"
End Sub
```

UserForm1 TextBox Mapping

TextBox	Functionality	Linked Logic

TextBox	Functionality	Linked Logic
1A	Control Register	`ReadControlPort()`
1B	SCADA Switch	`ToggleSCADASwitch()`
LED	Amplifier LED Control	`ControlLED(AmpLevel)`
Pin 7	Output Switch	`SwitchOffPin7()`
Relay Z	Impedance Relay Logic	`EvaluateRelay(Z, threshold)`

```
[Start]
   ↓
[Read Current Z]
   ↓
[Compare Threshold]
   ├─> (Above) → [Trigger Relay]
   └─> (Below) → [Continue Monitoring]
   ↓
[Log Event]
   ↓
[End]
```

🔄 Algorigramme: SCADA + LED + Pin 7

```
[Initialize System]
   ↓
[Check SCADA Switch]
   ↓
[If ON]
   ├─> [Read Amp Level]
   ├─> [If Amp > 5 → LED ON]
   └─> [Else → LED OFF]
   ↓
[Switch OFF Pin 7]
   ↓
[End]
```

📚 Curriculum Integration (Tab1/Tab2 Mapping)

Tab	TextBox	Description
Tab1	1B	SCADA Switch Control
Tab1	LED	LED connected to amplifier
Tab1	VCC	Voltaic power level
Tab1	1D	General protection

Tab	TextBox	Description
Tab1	1E	Data acquisition
Tab1	Pin 7	Output switch logic
Tab2	2A	Generator, transformer, capacitor analysis
Tab2	2B	Fault A/B/C, breaker, cable
Tab2	2C	Power station, ZTHV/XTHV, UPS
Tab2	2D	Network analysis, instrumentation
Tab2	2E	Power transfer, delta systems
Tab2	2F	Transformer connection, line instrumentation

Would you like me to scaffold this into a bilingual print

🔧 Modular SCADA Control Framework (VBA)

Core Variables and Structures

```
Dim ControlRegister As Byte
Dim PortStatus As Boolean
Dim SCADASwitch As Boolean
Dim LEDState As Boolean
Dim OutputPin7 As Boolean
Dim FaultA As Boolean, FaultB As Boolean, FaultC As Boolean
Dim BreakerStatus As String
Dim AmpLevel As Integer

Type Impedance
    rg As Double
    jxd As Double
End Type

Dim Z As Impedance
```

⚙ Core Subroutines

1A: Read Control Register

vb

```
Sub ReadControlPort()
    ControlRegister = &H1A
    PortStatus = (ControlRegister And &H1) = &H1
    MsgBox IIf(PortStatus, "Port Active", "Port Inactive")
End Sub
```

1B: Toggle SCADA Switch

```
Sub ToggleSCADASwitch()
    SCADASwitch = Not SCADASwitch
    MsgBox IIf(SCADASwitch, "SCADA Switch ON", "SCADA Switch OFF")
End Sub
```

LED Control Based on Amplifier Level

vb

```
Sub ControlLED(ByVal AmpLevel As Integer)
    LEDState = (AmpLevel > 5)
    MsgBox IIf(LEDState, "LED ON", "LED OFF")
End Sub
```

Output Pin 7 Logic

```
Sub SwitchOffPin7()
    OutputPin7 = False
    MsgBox "Pin 7 Output OFF"
End Sub
```

Fault Detection and Breaker Activation

vb

```
Sub CheckFaults()
    If FaultA Or FaultB Or FaultC Then
        MsgBox "Fault Detected"
        ActivateBreaker
    End If
End Sub

Sub ActivateBreaker()
    BreakerStatus = "Tripped"
    MsgBox "Breaker Tripped"
End Sub
```

⚡ Impedance-Based Relay Logic

vb

```
Function CalculateZ(rg As Double, jxd As Double) As Double
    CalculateZ = Sqr(rg ^ 2 + jxd ^ 2)
End Function

Sub EvaluateRelay(ByVal threshold As Double)
    If CalculateZ(Z.rg, Z.jxd) > threshold Then
        ActivateRelay
    End If
End Sub

Sub ActivateRelay()
    MsgBox "Relay Triggered"
End Sub
```

UserForm Integration (TextBox Mapping)

TextBox	Functionality	Linked Subroutine
1A	Control Register	`ReadControlPort()`
1B	SCADA Switch	`ToggleSCADASwitch()`

Modular Visual Basic Curriculum Framework (UserForm1)
?? Architecture Overview
" UserForm1 hosts over 40+ TextBox controls.
" Each TextBox maps to a curriculum module, technical function, or energy system descriptor.
" Logic is grouped into KFrames (K1-K40), Trade Modules, Energy Systems, and SCADA Control.
?? TextBox Mapping Table
TextBox Curriculum Domain Technical Logic
TextBox1 SCADA Switch (1B) ToggleSCADASwitch()
TextBox2 LED Control Description ControlLED(AmpLevel)
TextBox3 VCC Level (5.0V) If AmpLevel > 5 Then LED ON
TextBox4 Photovoltaic Installation PV grid logic
TextBox5 General Protection (1D) ActivateBreaker()
TextBox6 Data Acquisition (1E) ReadSensorData()

TextBox7 Output Switch Pin 7 SwitchOffPin7()
TextBox20-29 Generator, Transformer, Motor, Capacitor Analysis (2A-2F) CalculateZ(), EvaluateRela
y()
TextBox30-38 Metering, Calibration, Performance, Stability (3A-4C) P=V×I, S=P+jQ, Matrix(I1,I2)
TextBox40 Signal Processing, IoT, Energy Saving (4A-4B) x?(t)=Ax(t)+Bu(t)
TextBox9 Revenue, Compliance, Planning R = P > Q
TextBox10-19 Discovery Electronics, LED, Infrared, Alarm Timer, Flash, Sound, Detection
TextBox22-24 PCB, UPS, Modicon, Eaton Ampacity, Remote Generator
TextBox25-27 PV Grid, Cabling, Switchgear Isolation, Overcurrent, Self Power
TextBox28-29 Career Workbook, Excel Tools Load Switch, Component Sizing
TextBox31-33 Trade Theory, Syllabus, Compliance Didactic Panel, Qualification
TextBox34-36 Career Discovery, Logic Control Digital Libraries, Circuit Projects
TextBox37-38 Postgraduate Research, NRF, AIU Repository, Publication, Funding
