Answer ALL the questions.

Read ALL the questions carefully. Number the answers according to the numbering system used in this question paper.

Round

off ALL calculations to THREE decimal places.

Use the correct symbols and units.

Start each question on a NEW page.

Keep subsections of questions together.

ALL circuit diagrams and vector diagrams

must be at least one third of a page

and must be fully labelled.

Write neatly and legibly.

QUESTION 1

1.1 Draw and explain the operation of a Ward Leonard control system, controlling the speed and direction of a large DC shunt motor.

-7

1.2 A 250 V, DC series motor runs at 1 000 r/min while drawing a current of 40 amperes from the supply. The resistances of the armature and series field are 0,25 ohms and 0,1 ohms respectively. Calculate the speed

at which the motor will run if a 0,2 ohm resistor is connected in parallel with the field coils. Assume that there is a 20% increase in the torque and that the field coils are unsaturated.

(2) 1.3 Draw TWO fully labelled circuit diagrams used to solve
